The Fashion Parade of the Garden — 1944

NEW CREATIONS

BEAUTY

COLOR TINTS

Novelties form the fashion parade of the garden; a pageantry of new beauty, grace and individuality; a revelation of new color tints—larger, double flowers—sweeter fragrance—longer stems—taller, dwarfer, hardier, more vigorous plants—earlier flowering. These improved characteristics mean greater adaptability. They mark the advance of progress in plant perfection.

"ALL AMERICA SELECTIONS" are the choice of the Nation's leading horticultural judges, as being the most worthy new varieties introduced each year. They include species from around the World, imported and planted in twelve different localities in the United States, from whence they are judged. Their recommendations are authentic and dependable; your safeguard against ambiguous creations or claims.

Novelties within our garden walls intrigue us, for they tax our keenest anxiety in expectation of unrevealed new beauties—and we proud ourselves of keeping in with the modern touch.

when dusted on seeds whether sown in fields or in flats. It is a non-poisonous, non-metallic dust which adheres readily to the seed forming a protective and disinfectant coating against harmful fungi causing damping-off and other organisms of disease which might get on the seed, resulting in better stands and greater yields. It has an advantage in that the seed may be treated at any time; it does not deteriorate with age and will not spoil the inoculation of legumes. Recommended for all garden seeds except beet. Try it especially on Lima Beans.

The Full Pantry Shelf

is a tribute to every *victory gardener*, for he or she, whether amateur or professional, whether successful or not-too-successful, has helped increase the nation's food production. . . .

To some, the experience was a new venture; you who are gardening for the first time; and you who have converted from flowers to vegetables. No doubt some of you have made mistakes; but you are the wiser for having made them. The percentage of failures may be traced to a few items, rather than with entire gardens. It should give you great pleasure, and make you proud to know, that you have succeeded where the gloomy prophets predicted 50% failures; that seed would be shamefully wasted. Yes, even some of our officials shared this belief, for their remarks in allotting Rotenone Dust for insect killing, were of the nature that the material would be wasted. Your results speak for themselves.

But for your contribution in increasing the food production, the black market no doubt would have spread to the pantry shelf.

Keep up the splendid work this year. While there are some shortages, they are not enough to cause undue alarm with the suburban gardener. However, it is advisable to order early to be sure of getting your first choice, and quick service.

Beautiful Lawns by Burnett Seedsmen

Formula No. 1 Lawn Grass Seed Mixture

It requires no more effort to sow the best grass seed mixture than it does a poorer grade, and it is less expensive when you consider its permanence which eliminates constant resowing. Formula No. 1, the **balanced mixture**, is composed of several of the choicest, re-cleaned dwarf and spreading grasses, each serving its specific purpose; the **quick growing** biennials which act as nurse crops to the **slower germinating** more permanent sorts which reach maximum maturity only after 2 or 3 years; the **spreading varieties** which fill in bare spots left vacant by the disappearing (after a few seasons) biennial grasses, and the natural **drought resistant** varieties. Formula No. 1 will produce a fine, deep velvety green, close turf which will lend a tone of intimacy to the palatial mansion or the humblest dwelling. It completes the landscape. Lb. 70c; 5 lbs. \$3.25; 25 lbs. \$15.50; 100 lbs. \$60.00.

Special Lawn Grass Seed Mixture

You sow and sow, and sow, when, providing the proper mixture, one sowing should be sufficient. With our **Special Lawn Grass Seed Mixture** you can sow a lawn with complete assurance of immediate results within 5 to 7 days which will become more beautiful with the ensuing months. Accurately compounded to include biennial and perennial, choice, re-cleaned grasses of highest germination. It contains no fillers; one pound will sow 200 square feet of surface. Shady Place Lawn Grass Seed Mixture

Certain grasses, like certain flowers, revel and flourish in the shade. By including sufficient quantities of the shade loving grasses along with commodious amounts of the choicest dwarf and creeping grasses, you may be assured of a successful lawn in the shade. Remember, in shaded situation where the sun's rays do not permeate sufficiently to dry the ground, a damp and acid condition exists. It is well to add lime before sowing. Lb. 70c; 5 lbs. \$3.25; 25 lbs. \$15.50; 100 lbs. \$60.00.

USE . . . CHIMNEY SWEEP TO KEEP THE HOME FIRES BURNING

Don't let the family suffer from cold this winter because of insufficient heat. 3/16" soot causes a 69% fuel loss, for soot has five times the insulating value of asbestos.

What, with fuel rationing, you will want to get the utmost heat out of your allotted fuel, whether coal, oil or gas. Chimney Sweep, dusted over coals or blown onto oil or gas flames will destroy soot from fire-box to chimney top. Easy to apply. Non-inflammable; non-explosive. No fuss, no muss.

select flower seeds strains

Asters (Wilt Resistant)

Need no introduction, but what is **Wilt Resistant Aster Seed**? It's a strain of seed produced from plants that were grown in heavily wilt-infested soil. It is reasonable to infer that if a strain was able to grow to full maturity and bear seed, it's genera or offspring must likewise be immune to wilt. Don't take chances, sow **Wilt Resistant Strain Asters** wherever possible.

Asters prefer rich sandy or loamy soil. Use well rotted manure or phosphate fertilizer. Cultivate and water regularly. Sow seeds six weeks before intended transplanting; water immediately after. Set tall varieties 18 in. apart, medium sorts 12 in. apart, dwarf types 9 in. apart.

Delphinium Seeds

VETTERLE & REINELT'S (PACIFIC HYBRIDS) were awarded a gold medal at the 1939 and 1940 Oakland Spring Garden Shows, the annual flower events of the Pacific Coast. Could not compete in 1941. V. & R. Delphiniums are classed with the top-ranking strains of the world. Praises of them are just as numerous and sincere from the professionals as from the amateurs.

HAND CROSS-POLLINATED seed is V. & R.'s best strain. This stock possesses the most desirable characteristics, qualities which are intensified to the greatest degree possible. The percentage of show specimens from this hand cross pollinated seed is the highest obtainable.

SELF-POLLINATED seed is collected from outstanding plants and will produce plants fairly uniform in color and type. For exhibition plants, however, sow the hand cross pollinated seed.

Blue Bird Series (new 1941). At last a true blue Delphinium; clearest medium blue with white bee. Besides coming true to color they carry well rounded 2½ in. flowers; long graceful spikes. A new standard in blues of today.

BLACK KNIGHT (new '39). The darkest of them all; the heavy, velvety texture lends a tone vividness and luminosity never seen before; 2½ in. florets; long, well formed spike.

BLUEJAY. Strikingly clear true blue, medium to dark, intense and alive with dark contrasting bee.

GALAHAD SERIES (new 1939). A giant race—3 in. individual white flowers of heavy, glistening texture, well spaced on strong, thin cylindrical spikes; fairly mildew resistant.

CAMELIARD SERIES (new 1940). Pure lavender self with white bee. Perfectly formed flowers; well balanced spike.

King Arthur Series. Rich royal purple with a velvety texture and large white bee. One of the most brilliant.

ROUND TABLE SERIES (new 1940, July delivery). New color developments from over 300 crosses possessing immense size spikes.

PARADISE (New '41) Illustrated)

Here is an asparagus that actually comes into bearing **ONE YEAR EARLIER** than any other variety. An exceptionally strong, vigorous producer. Some say it produces twice the crop of ordinary asparagus. The stalks are like Martha Washington in appearance, large and green. Just imagine, only 6 to 8 stalks needed to make a pound. Its flavor is unusually mild and liked by all. Paradise is rust-resistant. Seed sown in Spring will bear asparagus for picking 2 years later. One year old Paradise roots, set out this Spring, will produce next year, asparagus as large and stalky as ordinary two- and three-year-old roots.

Fifty Day Sprouting Broccoli

Broccoli

Easier to grow than Cauliflower.

No other table green has captured the appetites of a Nation more than Broccoli, and why not? Its delicious fine flavor is appetizingly pleasing even to children, yet rich in iron; more easily digested and is of easier culture. Set plants 18 in. apart in rows and 24 in. between; when the center flowers form, cut with about 7 in. of stem; this will be followed later by several smaller heads. No fuss in tying up, like in cauliflower.

Fifty Day Sprouting Calabrese

Just think of it—you can pick "Fifty Day Sprouting Broccoli" in 40 to 50 days after transplanting, in certain localities; 50 to 60 in others. It is unquestionably the earliest in cultivation, yet may be used for late sowing (up to July). The heads are large, deep green, the texture extra fine and tender, the taste superb. It is a sprouting type, producing many lateral heads after the center head is cut; being a great heat resister, it will not burst into flower. Seeds of this superlative variety were imported direct from the grower in Italy.

NEW LETTUCE "Great Lakes"

Great Lakes (H.M., A.A.S., 1944). Imperial type. The best Summer lettuce to date, being remarkably resistant to heat drought and tipburn. Clematis and Other Climbing Plants and Vines

Only in recent years have American gardeners been able to enjoy the rare beauty of Clematis hybrids. These European garden treasures are notable for their spectacular flowers of outstanding color and form. They lend dignity and charm to a garden, growing on trellises, arbors, pergolas, old tree stumps and walls; varying from 6 to 12 ft. in height, they flaunt their beauty and may be enjoyed from many parts of the garden. Most useful from a decorative standpoint, lasting well when cut and lending themselves to unique arrangements. **CULTURAL DIRECTIONS:** Clematis prefer partial shade. Mulch well with well rotted manure and provide trellis. Also advisable to provide Winter protection at root.

Hormodin Powder Now

IN THREE STRENGTHS TO SIMPLIFY THE ROOTING OF CUTTINGS

Hormodin Powder makes it possible to propagate practically all varieties of plants from cuttings. Hormodin Powder contains the hormone-like plant growth substance (Indolebutyric Acid) that stimulates rapid root growth on cuttings.

Simple to Use: Dip in water; dip in Hormodin Powder; plant in sand.

Vivid proof of effectiveness of Hormodin Powder: Before and after.

Since different plants require different treatment, Hormodin Powder has been developed in three strengths, paralleling the range of hormones in nature.

Lawn Grass Seed

WHAT makes this peaceful landscape so beautifully balanced? What makes it so restful to the eye—to the mind? That soothing mass of green color. The green of the leaves. The green of the lawn. For it is said that green, the color of sophistication, leads to restraint. It is grave, dignified. It arouses in us an emotion of tranquility. You, too, can lend a touch of placidness to your own home-grounds by seeing that your lawn is well made. See that it is seeded with vigorous grass seeds, the proper sorts to produce that deep velvety green lawn. May we suggest BURNETT-SEEDSMEN'S FORMULA NO. 1, the balanced lawn grass seed mixture? FORMULA NO. 1 is sure to produce that desired green lawn, just the tone to complete the landscape. And at nominal cost, too.

FORMULA NO. 1 sells for: Lb. 70c; 5 lbs. \$3.25; 25 lbs. \$15.50; 100 lbs. \$60.00, prepaid. (No rise in price over 1942 or 1943.)
